About Me

Hello! My name is Reihan Agam. I am currently a Mobile Developer specializing in Flutter, but I am willing to become a Fullstack Developer with a tech stack including Node.js, Go, and Nest.js for the backend, and Codeigniter 4, Next JS for the frontend.

Work Experience

2021 - NOW | Flutter Mobile Developer / Web Developer / Dev Ops
PT Inovatif Tujuh 8 / PT LangitDigital78

I am a versatile Fullstack Developer with experience in both Front End and Back End development. I build robust server-side solutions and craft engaging user interfaces that bring ideas to life.

My main focus is developing applications tailored to client needs, with a strong emphasis on social platforms and community-based applications. On the Back End, I work with Node.js, Nest.js, and Go, using MySQL for database management. For the Mobile Front End, I use Flutter to build high-performance apps, while on the Web Front End, I work with CodeIgniter 4 and Next.js to create responsive, modern websites.

I deploy my applications on DigitalOcean servers running Ubuntu, secured with SSL certificates from Let's Encrypt and served using Nginx as the HTTP server. While I am not a DevOps engineer, I have hands-on experience setting up and managing servers with Nginx.

In short, I turn client ideas into scalable, secure, and user-friendly applications from start to finish.

2020 - NOW | Web / Flutter Mobile Developer
PT Connexist Indonesia / PT Inovatif 78

My Assignment focus on Mobile App Development
with position Front End Developer, technology what I use is Flutter. My first project is developing existing project, Kepasar**.**
And I was entrusted to be the PM (project manager) by my boss for a college student assignment who was doing practical work on creating a CMS (Content Management System) for Kepasar.

2019 - 2019 (8 Month Contract) | Junior Web Developer
PT Smartdata Solusi Utama / PT Inovatif 78

In this project, I am a Junior Web Developer,
use Framework PHP Laravel 5 & Codeigniter 3 alongside JQuery, with database Oracle DB developing
website tax (BPRD) with guidance by my Team Leader :
- Developing feature form
- Fixing bug
- Integrate feature
- Design

Profile non Academic

2019 - 2020 | Fullstack Developer
Arkademy Tech Education Platform

In this training, I was coached to become a FullStack Developer
for 1 month with a timeline of creating RESTful API and consuming API with React JS on the web
as well as used on mobile apps in React Native as well
create a project with the team making E-Commerce applications
Agroculture-themed with React Native,
with also the last project I made an application
Realtime Chat with React Native and Firebase.
